Part 4 – Labeling Physical Features

Check accuracy on the map of Africa

Part 5 – Short Answer

1. Answers will vary. Student responses may include the following sentences:

- Savannas are flat, grassland areas. The climate is hot and dry. Rains normally come to savanna regions one season of the year. Few trees grow in savanna areas. Grasses spread root systems deep in the soil and can grow as high as 13 feet. Elephants, long-necked giraffes, rhinoceros, antelopes, zebras, cheetahs, lions, and leopards can be found in the savannas of Africa. The Serengeti Plain is a savanna region. Each year thousands of tourists visit the Serengeti to experience the wildlife.
- The rain forests of the Congo Basin are the second largest rain forests in the world. Only the rain forests of the Amazon in South America are larger. The hot, humid climate conditions and year-round rain support thick forests and many different kinds of plants and animals. Bamboo, banana, and rubber trees grow in the environment of the rain forest. The many animals of the rain forest include chimpanzees and gorillas.

2. Answers will vary but they should be associated with a very hot, dry climate.

Part 2 - Writing

Answers will vary. Many areas under the secondary industries (manufacturing) could be written about, such as telecommunications, hydroelectricity, transportation equipment, electronic products, and satellites. Topics under the tertiary realm could be research and development, bullet trains being built in other countries, and tourism in Hong Kong, Macao, and Japan. There certainly could be other acceptable answers.
